Implants - Latest

Have you been thinking about "bridging that gap" or throwing away your dentures?

Thanks to new technology, implants can now be completed in two months instead of six. Titanium Plasma Spray speeds up the integration of the implant. Please give us a call for more information.

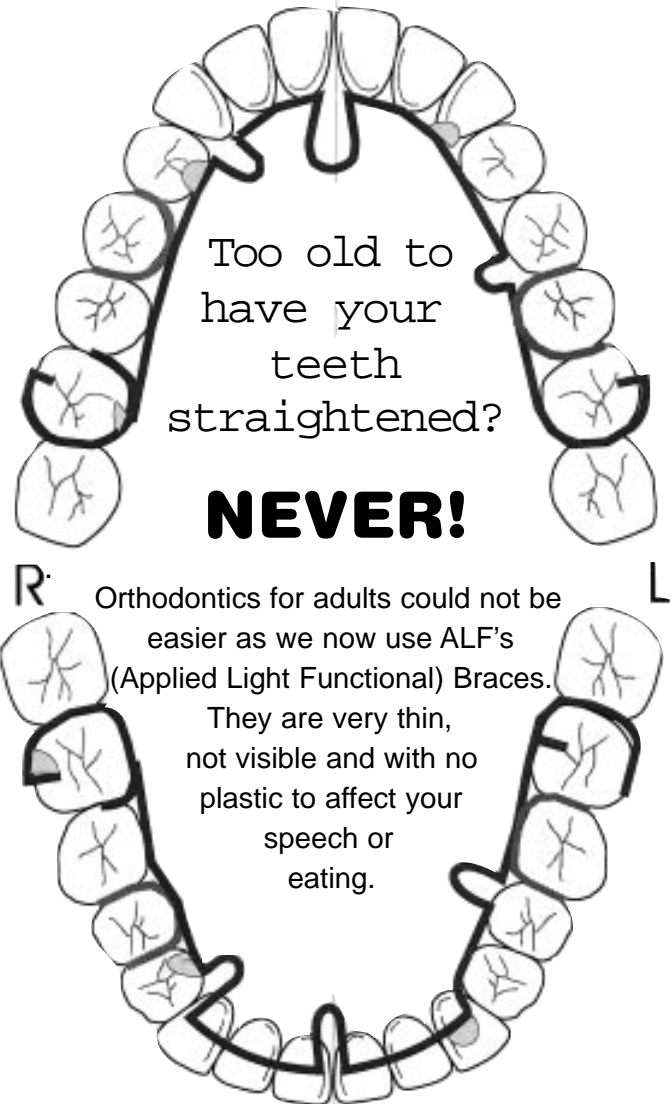

PRACTICE NEWS

André has been invited to lecture at Surrey University. He will be addressing Chiropractors on Temporo Mandibular Joint disorders, headaches and migraines.

The debate at Aldershot Army Officers Mess between André and Professor David Brown on the dangers of Mercury Amalgam, attracted over 100 dentists. Although swayed by the arguments about the dangers and risks, the audience still felt that many (especially within the NHS) would still be using Mercury Amalgam in years to come.

R L Orthodontics for adults could not be easier as we now use ALF's (Applied Light Functional) Braces. They are very thin, not visible and with no plastic to affect your speech or eating.

"No one will know".

ALF's work quickly, so if you or anyone you know would like to find out more, please contact the practice.
